

Data sheet

ELIMINATOR® Hermetic bi-flow filter drier

Types DMB and DCB

Hermetic bi-flow filter driers, types DMB and DCB are for use in liquid lines on heat pumps.

Hermetic bi-flow filter driers have built-in check valves which ensure that refrigerant liquid always flows through the filter driers from the outer side of the filter core towards the center. Thus all dirt particles are retained irrespective of flow direction.

DMB and DCB filter driers ensure fast and effective adsorption of moisture as well as organic and inorganic acids.

When building heat pump systems, the use of bi-flow filters can, depending on the type of system, save up to ten solder connections. This reduces production costs and the number of potential leakage points.

Available with flare and solder (cu-plated steel) connections.

For other connections please contact your Danfoss Sales Representative.

Features

The Core type DMB

- 100% 3Å Molecular Sieve core
- High drying capacity minimizing the risk of acid formation (hydrolysis)
- Recommended for use with HFO, HC, HFC and HCFC refrigerants
- Will not deplete oil additives

The Core type DCB

- 80% 3Å Molecular Sieve with 20% activated alumina
- Perfect core blend for systems that operate at high condensing temperatures and require high drying capacity
- Recommended for use with HFO, HC, HFC and HCFC refrigerants

The Shell

- PED approved for PS 46 bar
- Available with flare and solder (cu-plated steel) connections
- Optimum flow characteristics and dirt retention
- The check valves are not sensitive to dirt and give minimum restriction, irrespective of flow direction

The Filter

- Effective dirt removal to 25 µm
- No dirt released by reversing the flow direction
- Available in sizes 8 – 30 cubic inches

Data sheet | ELIMINATOR® Hermetic bi-flow filter drier, types DMB and DCB

Approvals

UL US, file no. SA 6398
 PED 97/23/EC - a3p3
 Compliant with ATEX hazard zone 2

▲ Note: Only solder versions (cu-plated / pure copper) and connection sizes below 25 mm are approved for flammable refrigerants now.

Technical data

Flare connection

Surface and volume

Filter	Solid core surface	Solid core volume	Filter drier volume (shell volume)	Filter drier volume (net volume)
	[cm ²]	[cm ³]	[l]	[l]

¹⁾ Drying capacity is based on following moisture content test standards before and after drying:

- R134a: 1050 – 50 ppm W
- R404A, R507: 1020 – 50 ppm W
- R407C: 1020 – 50 ppm W
- R410A: 1050 – 50 ppm W
- R22: 1050 – 60 ppm W

In accordance with ARI 710-2004

²⁾ Given in accordance with ARI 710-2004 for

- t_e = -15 °C
- t_c = 30 °C
- Δp = 0.07 bar

For technical data on other refrigerants, please contact your Danfoss Sales Representative

Data sheet | ELIMINATOR® Hermetic bi-flow filter drier, types DMB and DCB

Selection

Type selection is made considering the application

Refrigerant and oil types		DCB	DMB
Refrigerant	HFO	Recommended	Recommended
	HC ¹⁾	Recommended	Recommended
	HFC	Recommended	Recommended
	HCFC	Recommended	Recommended
Oil	Mineral or AB	Recommended	Recommended
	POE or PAG, pure	Recommended	Recommended
	POE or PAG, with additives	Not recommended ²⁾	Recommended

¹⁾ Only solder versions (cu-plated / pure copper) and connection sizes below 25 mm are approved for flammable refrigerants now

²⁾ DCB Hermetic filter driers contain activated alumina, which is a polar material used for acid adsorption. Many oil additives are also polar substances and can be adsorbed by the activated alumina, rendering them useless, and reducing the drier's acid capacity, though this is not harmful to the system

Selection example

Select the appropriate type (DMB or DCB) based on refrigerant and oil type. Then select the drier size based on the adsorption and liquid capacity required.

c. Result
DMB 164 or DMB 165 can be used

a. Amount of charge: 15 kg R134a at tL = 24 °C To dry 15 kg R134a at 24 °C from 1050 to 60 ppm moisture, a DMB 16 is necessary

If the initial moisture content is very small or a planned change of the filter drier is considered, a smaller filter drier size can be chosen.

b. Cooling capacity: Qe = 25 kW
To obtain a mass flow corresponding to 25 kW cooling capacity with a DMB 16 filter drier, a 1/2 inch connection must be chosen. Larger connections can be chosen in accordance with the liquid line dimension

Type	Drying capacity [kg] refrigerant ¹⁾												Liquid capacity [kW] ²⁾						Max. Working Pressure PS [bar]
